This document contains the NSW Education Standards Authority requirements for assessing and reporting achievement in the Year 11 and Year 12 courses for the Higher School Certificate, and provides details of the HSC examination in this course. From time to time, changes are made to HSC assessment and examination requirements. Such changes will be made available through updates to these materials.

Please note that the version on the NESA website is always the current version.

Introduction to Assessment in Stage 6

The NSW Education Standards Authority (NESA) promotes a standards-referenced approach to assessing and reporting student achievement.

Assessment is the process of gathering valid and useful information and making judgements about student achievement for a variety of purposes.

In Stage 6, those purposes include:

- assisting student learning
- evaluating and improving teaching and learning programs
- providing evidence of student achievement and course completion in Year 11 and Year 12 courses
- providing data for the end of school credential, the Record of School Achievement (RoSA) or Higher School Certificate (HSC).

Schools are required to develop an assessment program for each Year 11 and Year 12 course. NESA provides information about the responsibilities of schools in developing assessment programs in course-specific assessment and reporting requirements and in Assessment Certification Examination (ACE).

Assessment for, Assessment as, Assessment of Learning

Assessment is an essential component of the teaching and learning cycle. Assessment for, assessment as and assessment of learning are approaches that enable teachers to gather evidence and make judgements about student achievement. These are not necessarily discrete approaches and may be used individually or together and formally or informally.

Assessment is most effective when students:

- are involved in setting learning goals
- know and understand assessment criteria
- are able to monitor their own learning and reflect on their progress
- receive feedback that helps them understand how to improve their learning.
School-based Assessment in Stage 6

All teaching and learning activities are considered important for understanding course content and developing knowledge, understanding and skills in a subject. School-based assessment involves a range of informal (formative) assessment and formal (summative) assessment to provide information about student achievement of syllabus outcomes. Informal and formal assessment assists teachers to make judgements about student progress. A range of assessment activities and tasks provides opportunities for students to demonstrate achievement of syllabus outcomes in different ways.

Informal assessment

Teachers use informal assessment opportunities throughout the teaching and learning cycle to gather evidence about how students learn and what they know. Informal assessment includes activities undertaken and anecdotal evidence gathered throughout the teaching and learning process in a less prescribed manner than formal assessment.

These activities provide evidence for teachers and inform feedback to students in relation to improving their learning. Informal assessment may include a range of strategies such as questioning, class discussion, observations and student self-evaluation.

Formal assessment

Formal school-based assessment provides opportunities to gather evidence about student achievement of syllabus outcomes in different ways to the HSC examinations. Formal assessment tasks are those which students undertake as part of the school-based assessment program, reflecting specific course requirements, components and weightings.

A formal assessment task may contain more than one part. The task notification should detail the requirements for each part, including that all parts are to be submitted and/or completed together.

Tests of limited scope (ie including a small number of content areas or topics or modules) will continue to be relevant and appropriate methods of formal assessment. These types of tasks are not considered formal written examinations.

A formal written examination is defined as a task such as a Half Yearly, Yearly or Trial HSC Examination completed during a designated examination period. It is undertaken individually, under supervised examination conditions and includes one or more unseen questions or items. A formal written examination is used to gather evidence about student achievement of a range of syllabus outcomes, at a point in time. A formal written examination is often in the format of an HSC examination and typically draws from most or all content areas or topics or modules completed at that point in time. Schools are able to schedule more than one written examination to provide opportunities for students to prepare for and experience examination conditions. However, in Year 12 only one formal written examination can contribute to a formal assessment schedule.
Evidence gathered through formal assessment assists teachers to report on student achievement in relation to syllabus outcomes and standards at a point in time, and is often used for grading or ranking purposes. The components and weightings and the prescribed nature of some tasks ensure a common focus for school-based assessment in a course across schools, while also allowing for flexibility in the design of some tasks at the school level.

Further guidance and advice can be found on the NESA website.
Year 11 Mathematics Standard School-based Assessment Requirements

The components and weightings for Year 11 are mandatory.

<table>
<thead>
<tr>
<th>Component</th>
<th>Weighting %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Understanding, Fluency and Communication</td>
<td>50</td>
</tr>
<tr>
<td>Problem Solving, Reasoning and Justification</td>
<td>50</td>
</tr>
</tbody>
</table>

The Year 11 formal school-based assessment program is to reflect the following requirements:

- three assessment tasks
- the minimum weighting for an individual task is 20%
- the maximum weighting for an individual task is 40%
- one task must be an assignment or investigation-style with a weighting of 20–30%.

Information about the assignment or investigation-style task in Mathematics Standard

The length and scheduling of the assignment or investigation-style task is at the discretion of the school. The task should provide opportunities to gather evidence about the:

- achievement of a range of outcomes
- application of Working Mathematically components
- demonstration of knowledge and skills in different ways to the HSC examinations.

The task provides application and modelling opportunities.

Outcomes that are content specific should be assessed and should include the following:

MS11-9: uses appropriate technology to investigate, organise and interpret information in a range of contexts

MS11-10: justifies a response to a given problem using appropriate mathematical terminology and/or calculations

The following examples provide some approaches to task types:

- an investigative project or assignment involving presentation of work in class
- an independently chosen project or investigation
- scaffolded learning tasks culminating in an open-ended or modelling-style problem
- a guided investigation or research task involving collection of data and analysis.
Year 12 Mathematics Standard School-based Assessment Requirements

Note that the Year 12 assessment requirements are different for Mathematics Standard 1 and Mathematics Standard 2

Mathematics Standard 1

NESA requires schools to submit a school-based assessment grade for each Year 12 candidate in this course. Formal school-based assessment tasks are based on course requirements, and components and weightings that contribute to the determination of the final grade for this course. The result submitted by the school provides a summation of each student’s achievement measured at several points throughout the course. Further information on reporting on HSC Mathematics Standard 1 Stage 6 is provided in the Reporting in Stage 6 section of this document.

The school-based assessment grade submitted to NESA for Year 12 must not include measures of outcomes that address values and attitudes or reflect student conduct. Schools may decide to report on these separately to students and parents.

The collection of information for the Year 12 school-based assessment grade must not begin before the completion of the Year 11 course.

The components and weightings for Year 12 are mandatory.

<table>
<thead>
<tr>
<th>Component</th>
<th>Weighting %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Understanding, Fluency and Communication</td>
<td>50</td>
</tr>
<tr>
<td>Problem Solving, Reasoning and Justification</td>
<td>50</td>
</tr>
<tr>
<td></td>
<td>100</td>
</tr>
</tbody>
</table>

The Year 12 formal school-based assessment program is to reflect the following requirements:

- a maximum of four assessment tasks
- the minimum weighting for an individual task is 10%
- the maximum weighting for an individual task is 40%
- one task must be an assignment or investigation-style with a weighting of 15–30%
- only one task may be a formal written examination with a maximum weighting of 30%.

Information about the assignment or investigation-style task in Mathematics Standard 1

The length and scheduling of the assignment or investigation-style task is at the discretion of the school. The task should provide opportunities to gather evidence about the:

- achievement of a range of outcomes
- application of Working Mathematically components
- demonstration of knowledge and skills in different ways to the HSC examinations.
The task provides application and modelling opportunities.

Outcomes that are content specific should be assessed and should include the following:

MS1-12-9: chooses and uses appropriate technology effectively and recognises appropriate times for such use

MS1-12-10: uses mathematical argument and reasoning to evaluate conclusions, communicating a position clearly to others

The following examples provide some approaches to task types:

- an investigative project or assignment involving presentation of work in class
- an independently chosen project or investigation
- scaffolded learning tasks culminating in an open-ended or modelling-style problem
- a guided investigation or research task involving collection of data and analysis.

**Information about a formal written examination in Mathematics Standard 1**

This task may assess a broad range of course content and outcomes. Schools may choose to replicate the timing and structure of the HSC examination. More information about formal written examinations is provided on page 5 of this document.
Mathematics Standard 2

NESA requires schools to submit a school-based assessment mark for each Year 12 candidate in this course. Formal school-based assessment tasks are based on course requirements and components and weightings that contribute to the determination of the final mark for this course. The result submitted by the school provides a summation of each student’s achievement measured at several points throughout the course. Further information on reporting on HSC Mathematics Standard 2 Stage 6 is provided in the Reporting in Stage 6 section of this document.

The marks submitted for Mathematics Standard 2 by a school should reflect the rank order of students, and must be on a scale sufficiently wide to reflect adequately the relative differences in student performances. The actual mark should not be revealed to students as it is subject to moderation and may become confusing for students when they receive their results. Students must be informed that they can obtain their Assessment Rank Order Notice from Students Online after the last HSC examination at their centre and within the period of time for appeals.

The school-based assessment mark submitted to NESA for Year 12 must not include measures of outcomes that address values and attitudes or reflect student conduct. Schools may decide to report on these separately to students and parents.

The collection of information for the Year 12 school-based assessment mark must not begin before the completion of the Year 11 course.

The components and weightings for Year 12 are mandatory.

<table>
<thead>
<tr>
<th>Component</th>
<th>Weighting %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Understanding, Fluency and Communication</td>
<td>50</td>
</tr>
<tr>
<td>Problem Solving, Reasoning and Justification</td>
<td>50</td>
</tr>
</tbody>
</table>

The Year 12 formal school-based assessment program is to reflect the following requirements:

- a maximum of four assessment tasks
- the minimum weighting for an individual task is 10%
- the maximum weighting for an individual task is 40%
- only one task may be a formal written examination with a maximum weighting of 30%
- one task must be an assignment or investigation-style with a weighting of 15–30%.
Information about the assignment or investigation-style task in Mathematics Standard 2

The length and scheduling of the assignment or investigation-style task is at the discretion of the school. The task should provide opportunities to gather evidence about the:

- achievement of a range of outcomes
- application of Working Mathematically components
- demonstration of knowledge and skills in different ways to the HSC examinations.

The task provides application and modelling opportunities.

Outcomes that are content specific should be assessed and should include the following:

MS2-12-9: chooses and uses appropriate technology effectively in a range of contexts, and applies critical thinking to recognise appropriate times and methods for such use

MS2-12-10: uses mathematical argument and reasoning to evaluate conclusions, communicating a position clearly to others and justifying a response

The following examples provide some approaches to task types:

- an investigative project or assignment involving presentation of work in class
- an independently chosen project or investigation
- scaffolded learning tasks culminating in an open-ended or modelling-style problem
- a guided investigation or research task involving collection of data and analysis.

Information about the formal written examination in Mathematics Standard 2

This task may assess a broad range of course content and outcomes. Schools may choose to replicate the timing and structure of the HSC examination. More information about formal written examinations is provided on page 5 of this document.
HSC Examination

The specifications will apply to the Mathematics Standard Stage 6 syllabus commencing with the 2020 HSC examination program.

The external HSC examination measures student achievement in a range of syllabus outcomes.

The external examination and its marking relate to the syllabus by:

- providing clear links to syllabus outcomes
- enabling students to demonstrate the levels of achievement outlined in the performance band descriptions
- applying marking guidelines based on criteria that relate to the quality of the response
- aligning performance in the examination each year to the standards established for the course.

Mathematics Standard 1

There is no compulsory HSC external examination in Mathematics Standard 1. Students may choose to sit for an optional HSC examination.

Should a student seek an Australian Tertiary Admission Rank (ATAR), the examination mark may be used by the Universities Admissions Centre (UAC) to contribute to the calculation of the ATAR.

Examination questions may require candidates to integrate knowledge, skills and understanding developed through studying the course.

The examination will be based on the Mathematics Standard 1 Year 12 course and will focus on the course objectives and Year 12 outcomes. The Mathematics Standard Year 11 course content notated by ◊ will be assumed knowledge for this examination and may be examined.

Mathematics Standard 1 HSC Examination Specifications

The examination will consist of a written paper worth 80 marks.

The time allowed is 2 hours plus 10 minutes reading time.

A reference sheet will be provided.

Students may bring NESA-approved calculators for use during the examination.

The paper will consist of two sections.

Section I

There will be objective-response questions to the value of 10 marks.

Section II

Questions may contain parts.

There will be 30 to 35 items.
At least two items will be worth 4 or 5 marks.

The Mathematics Standard 1 examination will include items that are common with the Mathematics Standard 2 HSC examination. Common items will be worth 20 to 25 marks and will be distributed throughout Sections I and II.

**Mathematics Standard 2**

Examination questions may require candidates to integrate knowledge, skills and understanding developed through studying the course.

The examination will be based on the Mathematics Standard 2 Year 12 course and will focus on the course objectives and Year 12 outcomes. The Mathematics Standard Year 11 course will be assumed knowledge for this examination and may be examined.

**Mathematics Standard 2 HSC Examination Specifications**

The examination will consist of a written paper worth 100 marks.

The time allowed is 2 hours and 30 minutes plus 10 minutes reading time.

A reference sheet will be provided.

Students may bring NESA-approved calculators for use during the examination.

The paper will consist of two sections.

**Section I**

There will be objective-response questions to the value of 15 marks.

**Section II**

Questions may contain parts.

There will be 35 to 40 items.

At least two items will be worth 4 or 5 marks.

The Mathematics Standard 2 examination will include items that are common with the Mathematics Standard 1 HSC examination. Common items will be worth 20 to 25 marks and will be distributed throughout Sections I and II.

The Mathematics Standard 2 examination will include items that are common with the Mathematics Advanced HSC examination. Common items will be worth 20 to 25 marks and will be distributed throughout Sections I and II.
Adjustments to Assessment for Students with Disability

It is a requirement under the Disability Standards for Education 2005 for schools to ensure that students with disability can access and participate in education on the same basis as other students.

Some students with disability will require adjustments to assessment practices in order to demonstrate what they know and can do in relation to syllabus outcomes and content.

These may include:

- adjustments to the assessment process. Some examples include additional time, rest breaks, the use of a reader and/or scribe or specific technology
- adjustments to assessment activities. Some examples include rephrasing questions, using simplified language or alternative formats for questions
- alternative formats for responses. Some examples include writing in point form instead of essays, scaffolded structured responses, short objective-response questions or multimedia presentations.

Schools are responsible for any decisions about adjustments to course work and formal school-based assessment tasks throughout Year 11 and Year 12. Decisions regarding adjustments should be made in the context of collaborative curriculum planning. To access adjustments for the HSC examinations, an application for Disability Provisions must be submitted to NESA.

Providing adjustment does not restrict a student’s access to the full range of grades or marks.

Examples of adjustments to assessment for students with disability can be found in course support materials. Additional advice is available on the NESA website.
Mathematics Life Skills

Students undertaking the Mathematics Life Skills course will study selected outcomes and content informed by a collaborative curriculum planning process. Assessment should provide opportunities for students to apply their knowledge, skills and understanding to a range of situations or environments. Students undertaking Life Skills courses are not required to complete formal assessment tasks. Teachers are best able to determine the progress of the student.

Students may demonstrate achievement in relation to Mathematics Life Skills outcomes independently; with adjustments or with support. The type of adjustments and support will vary according to the particular needs of the student and the requirements of the activity.

Additional information about Life Skills eligibility, programming, planning and assessment is available on the NESA website.
Reporting in Stage 6

Year 11

Schools are responsible for awarding a grade for each student who completes a Year 11 course (except Life Skills and VET courses) to represent their achievement. These grades are determined by the student’s performance in relation to the Common Grade Scale for Preliminary Courses. Teachers make professional, on-balance judgements about which grade description best matches the standards their students have demonstrated by the end of the course.

Teachers are required to ensure that the grades awarded are consistent with published standards. This means that the grade a student receives in one school can be compared to the same grade anywhere in New South Wales. To ensure judgements are consistent with statewide standards, teachers compare their student work with work samples on the NESA website that are aligned to A to E grades.

Year 12

The use of both school-based assessment and, if applicable, an external examination allows measurements and observations to be made at several points and in different ways throughout the Year 12 course, and provides a valid and reliable assessment of students’ demonstration of the knowledge, skills and understanding described for each course.

Students who leave school prior to the HSC examinations will receive a Record of Student Achievement (RoSA). It records grades for their completed Stage 5 and Year 11 courses and any participation in Stage 6 courses that were not completed.

Information about the awarding of grades in Mathematic Standard 1

Schools will use the Achievement Level Descriptions for Mathematics Standard 1 to award grades for school-based assessment. NESA monitors the grades awarded by all schools and conducts work sample reviews to ensure the grades reported on NESA credentials are comparable. Information on retaining and submitting student work samples is available under Awarding Grades on the NESA website.

Information about the estimated examination mark for students entered for the optional HSC examination in Mathematics Standard 1

NESA requires schools to submit an estimated examination mark for students entered for the optional HSC examination in Mathematics Standard 1. This mark is an estimate of likely performance in the HSC examination. The estimated examination mark should reflect the student’s achievement on a task or tasks similar to the HSC examination, such as a trial HSC examination. This examination does not need to be part of the school assessment program.

The estimated examination mark that is submitted to NESA should not be revealed to students. In the case of a successful illness/misadventure application, NESA will refer to the estimated mark when determining the HSC examination mark for the student. Teachers are still able to provide students with results and marking comments for all assessment tasks.
HSC Credentials

The [HSC credentials](#) received by students report the school-based assessment and, where applicable, external examination measures of achievement.

**Mathematics Standard 1**

All students studying Mathematics Standard 1 for the HSC will have their school-based assessment reported on NESA credentials as a grade (A to E).

Students studying Mathematics Standard 1 who sit for the optional HSC examination will have an HSC mark and performance band derived from the HSC examination only. The HSC mark and performance band will be reported on a separate line to the school-based assessment grade on the NESA credential.

Student performance in the Mathematics Standard 1 optional examination is reported against standards on a course report. The course report contains:

- a level of achievement for the performance band descriptions
- an HSC mark located on the performance scale
- an examination mark.

The course report also shows graphically the statewide distribution of HSC marks of all students who have sat the HSC examination in the course. The distribution of marks is determined by students’ performances against the standards and not scaled to a predetermined pattern of marks.

**Mathematics Standard 2**

Typically, HSC results for Mathematics Standard 2 comprise:

- a moderated assessment mark derived from the mark submitted by the school and produced in accordance with NESA requirements for school-based assessment
- an examination mark derived from the HSC external examination
- an HSC mark, which is the average of the moderated assessment mark and the examination mark
- a performance band, determined by the HSC mark.

For the HSC, student performance is reported against standards on a course report. The course report contains:

- a level of achievement for the performance band descriptions
- an HSC mark located on the performance scale
- a school-based assessment mark
- an examination mark.

The course report also shows graphically the statewide distribution of HSC marks of all students in the course. The distribution of marks is determined by students’ performances against the standards and not scaled to a predetermined pattern of marks.
